Eloro Reports Assays from Rufina East New Mineralized Zone Chip Sampling to 63.8 g/t Au with 52.7 g/t Ag and 0.77% Cu

Toronto, Canada, August 12, 2015 – Eloro Resources Ltd. (TSX-V: ELO; FSE: P2Q; “Eloro”) and Tartisan Resources Corp. (CSE:TTC; “Tartisan”) are pleased to announce that they have received assays taken from the Rufina East, Rufina West, and San Markito mineralized zones of the La Victoria Polymetallic Property, Huandoval Region, Ancash Department, Peru.

Measured chip samples from the New Mineralized Zone on Rufina East (see News Release 5 May, 2015) ranged from **8.4 g/t gold, 39.6 g/t silver, and 1.26% copper to 63.8 g/t gold, 52.7 g/t silver, and 0.77% copper.**

Assays averaging **1.35 g/t gold and 29.80 g/t silver** were received from three samples taken from Rufina West; and assays averaging **0.77 g/t gold and 307.30 g/t silver** were received from two samples of the Breccia Zone on the San Markito Sector.

In addition, assay values of **3.79 g/t gold and 34.6 g/t silver** were obtained from a 45cm chip sample collected from a zone of graphitic sediments some 120m east of the New Mineralized Zone on Rufina East, where no sampling had been done previously.

Samples were taken for: 1) geochemical background testing; 2) geometallurgical studies, including the role of arsenopyrite in gold mineralization, and; 3) initial comminution testing of the mineralizing environments at Rufina East (oxide), Rufina West (oxide > sulphide) and San Markito (sulphide > oxide). The samples were collected during Eloro’s April 2015 site visit (see News Release 5 May 2015).

Sample No	UTM Zone 18L (m)			Sector	Zone	Sample Type	Bureau Veritas Assays		
	Easting	Northing	Elevation				Au ppm	Ag ppm	Cu %

Overlimit Reassay									
					Zone	Sample Type	Bureau Veritas Assays		
							Au ppm	Ag ppm	Cu %
56467	172750	9079908	3112	Rufina East	New Mineralized Zone	Metallic Screen + Fire Assay	17.7		
56470	172742	9079905	3112	Rufina East	New Mineralized Zone	Metallic Screen + Fire Assay	63.8		
56472	172555	9082831	4053	San Markito	Breccia Zone	Metallic Screen + Fire Assay		525	

Quality Assurance/Quality Control sampling included a Certified Reference Material (“standard”) and a duplicate sample inserted into the sample stream. The standard, an OREAS 62e sample, assayed 9.89 g/t gold and 9.70 g/t silver and has a certified reference value of 9.37 g/t gold and 9.86 g/t; both gold and silver values are within the 95% confidence limit for OREAS 62e. The duplicate sample returned 6 ppb gold compared to 7 ppb gold for the original, and <0.5 ppm silver in both cases. The original samples were digested in aqua regia and then assayed using ICP with MS finish. Overlimit samples (56467 and 56470 for gold and 56472 for silver) were re-assayed with metallic screen and fire assay with MS finish by Bureau Veritas (formerly Acme Labs and Inspectorate Labs in Lima, Peru, and Vancouver, Canada. Sample 56474 was digested with lithium borate fusion given high visible sulphides and assayed by ICP/MS at Agat Laboratories in Mississauga, Ontario.

“The La Victoria Property just gets more interesting as we receive more analytical results and build our understanding of the underlying system”, said Eoro Chairman and C.E.O. Mr. Tom Larsen, “especially at Rufina East with the discovery of another new mineralized zone that carries gold and silver.”

A detailed program of channel sampling by rock saw and geological mapping has been completed over the roadcuts at Rufina East and West; samples are being prepared for analysis. Mechanized trenching, diamond-drilling, and metallurgical testing are planned for 2015 on the La Victoria Polymetallic Project once the Declaración de Impacto Ambiental (“DIA”) project environmental permit has been approved by the Peruvian Ministry of the Environment.

About Eoro Resources Ltd.

Eoro is an exploration and mine development company with a portfolio of gold and base-metal

properties in northern and western Quebec. Eloro has been granted an option to acquire a 60% interest in La Victoria property, located in the North-Central Mineral Belt of Peru. The La Victoria Property is free of royalties and consists of two adjacent, but not contiguous, properties totalling eight mining concessions encompassing approximately 35 square kilometres. The La Victoria Property is within 50 kilometres of several producing mines, with three producers visible from the property which has good infrastructure with road-access and nearby sources of water and electricity.

For further information please contact Jorge Estepa, Vice-President of Eloro Resources Ltd. at (416) 868-9168.

About Tartisan Resources Corp.

Tartisan is an exploration and mine development Company which owns the La Victoria property, Tartisan's royalty-free flagship project located in northern Ancash Department. The Property has good infrastructure with access to road, water and electricity and is located at an altitude that ranges 3,100 m to 4,200 m above sea level. Tartisan has granted an option to Eloro to acquire a 60% interest in La Victoria property, located in the North-Central Mineral Belt of Peru.

For further information, please contact Mr. D. Mark Appleby, President & CEO and a Director of the Company, at 416-804-0280 (mark@tartisanresources.com)
